Our focus

Europe is getting older – year by year Europeans can enjoy longer and healthier lives. But demographic trends also vary across the continent. In some countries fertility is above replacement, in others rates are at historically low levels. Some regions are facing high immigration while others have shrinking population.

The collaborative network Population Europe provides comprehensive knowledge, information, and insights into fundamental demographic trends and diverging population developments. This expertise is key to understanding the political, social, and economic developments of Europe in the 21st century.

Under the auspices of the
European Association for Population Studies

In our Council of Advisors, over 100 population experts support us in preparing reports on policy-relevant topics and delivering scientific briefings for policy-makers and policy analysts.

In our Information Centre, we coordinate the dissemination of demographic facts and findings to a broad audience via www.population-europe.eu, provide media briefings and use a variety of other communication channels to inform Europe on population issues.
